## High-Level Design (Architecture)

The **Architecture** diagram provides an overview of an entire system of MBA APP, identifying the main components that would be developed for the product and their interfaces, which is MBA PASSPORT, DATABASE, and UI.

## MBA PASSPORT

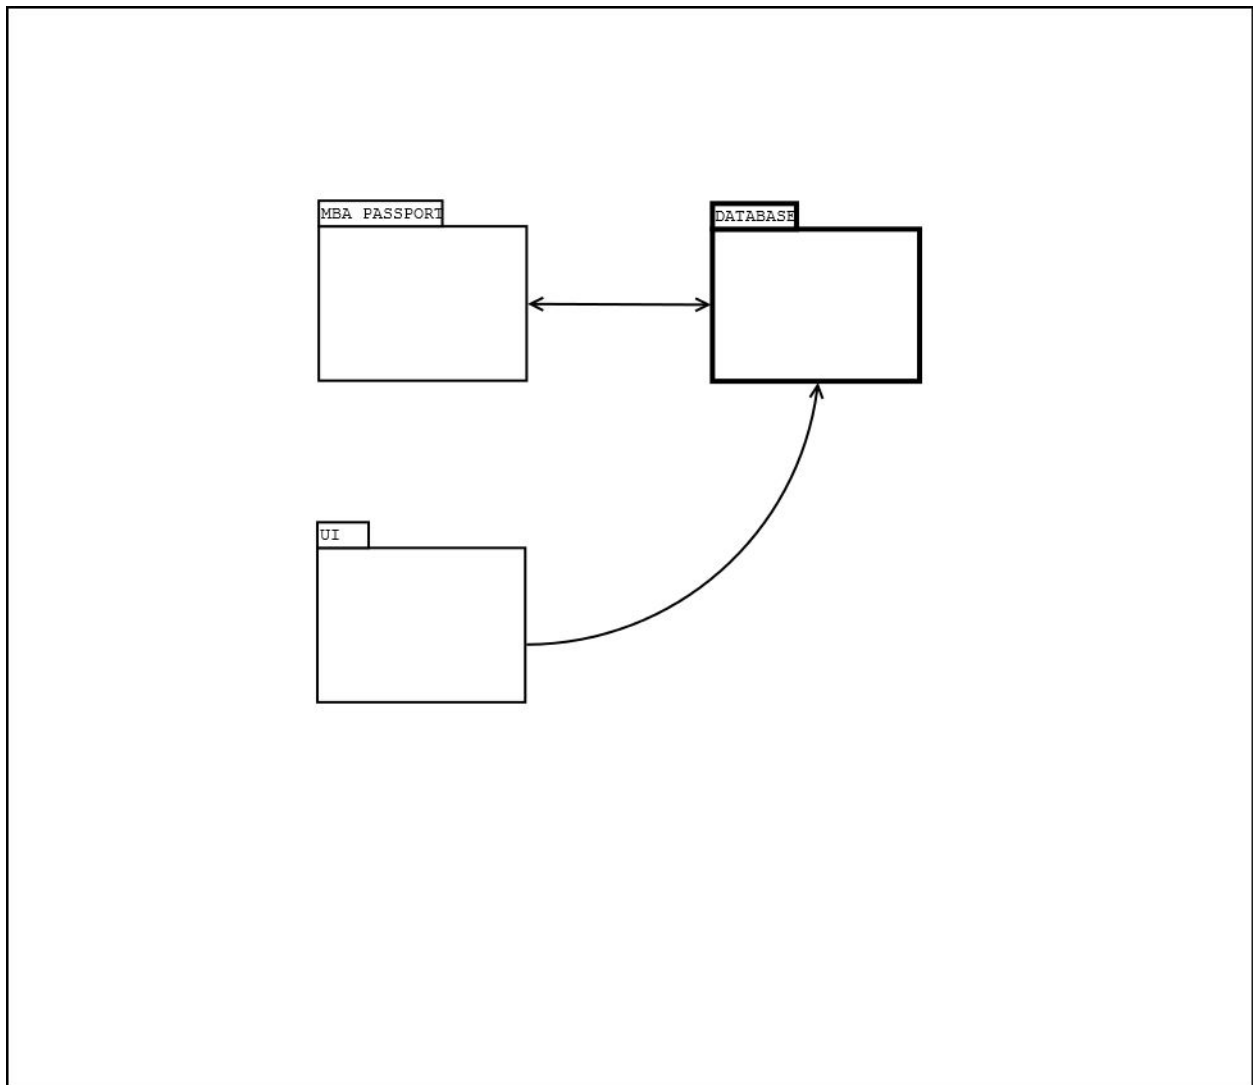

The MBA PASSPORT file includes Databases and UI. It interacts with Databases and UI to do its jobs for the users. There are two parts of users, MBA students and MBA employees.

As a student, you will open the app to a home screen which will display some basic information about the MBA and a menu for navigating the app to one of the other several pages.

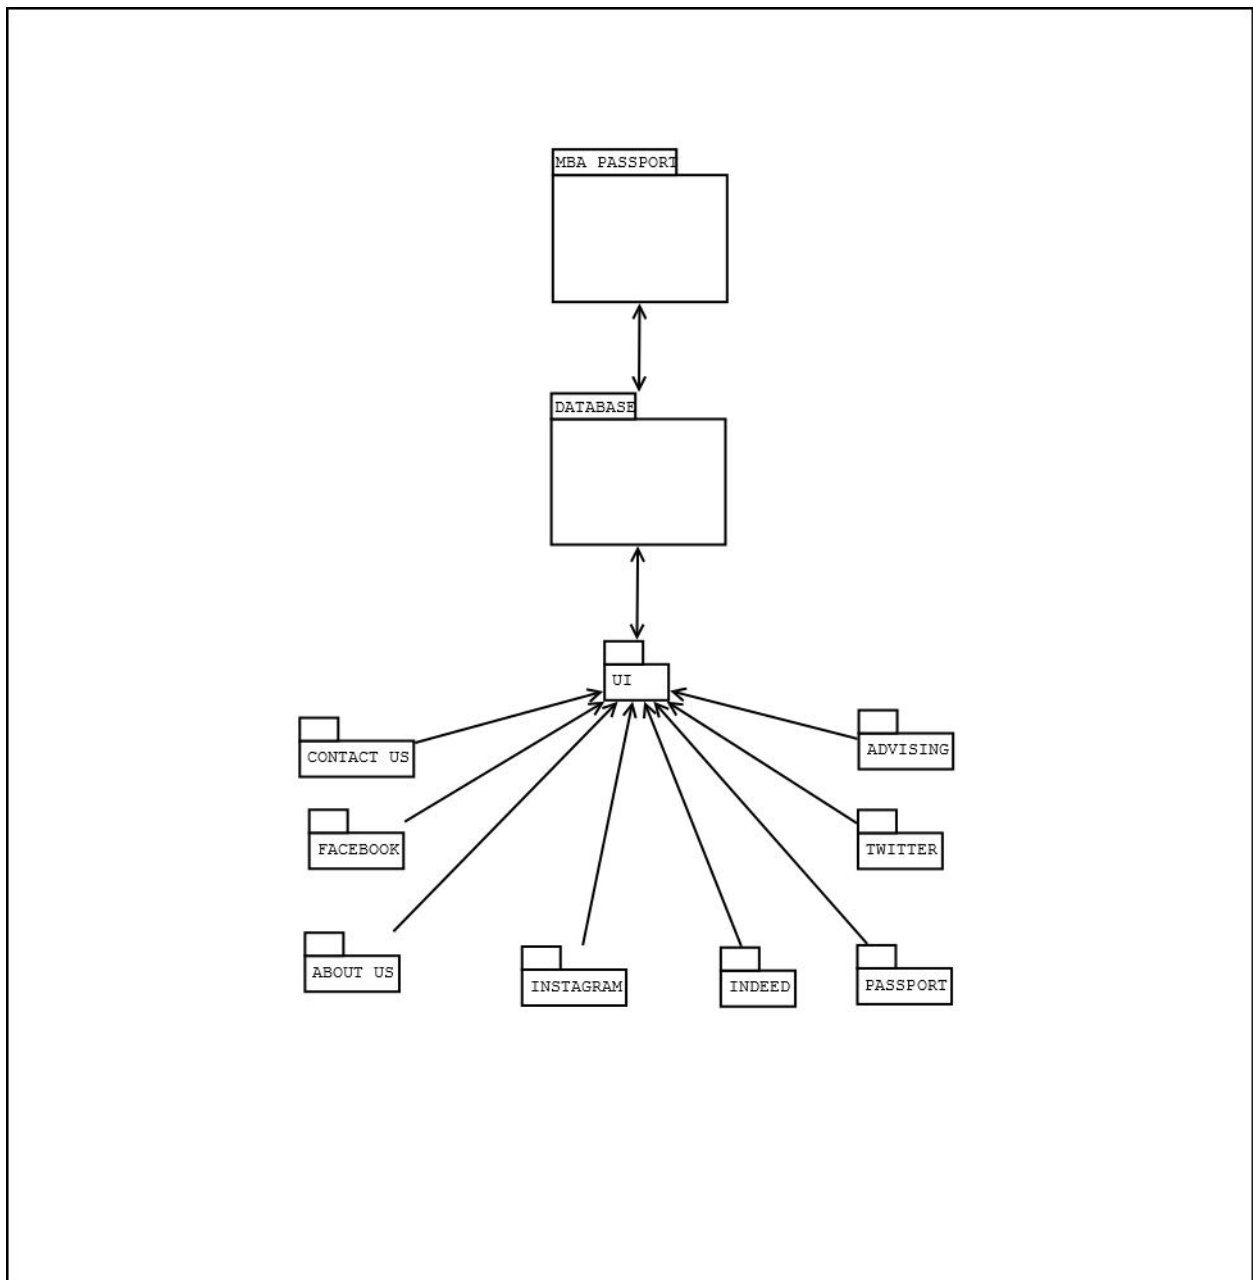

As an employee for the MBA, a system will be set up using a database to store information that will need to be regularly updated when information changes for faculty and information of the Program

## DATABASE

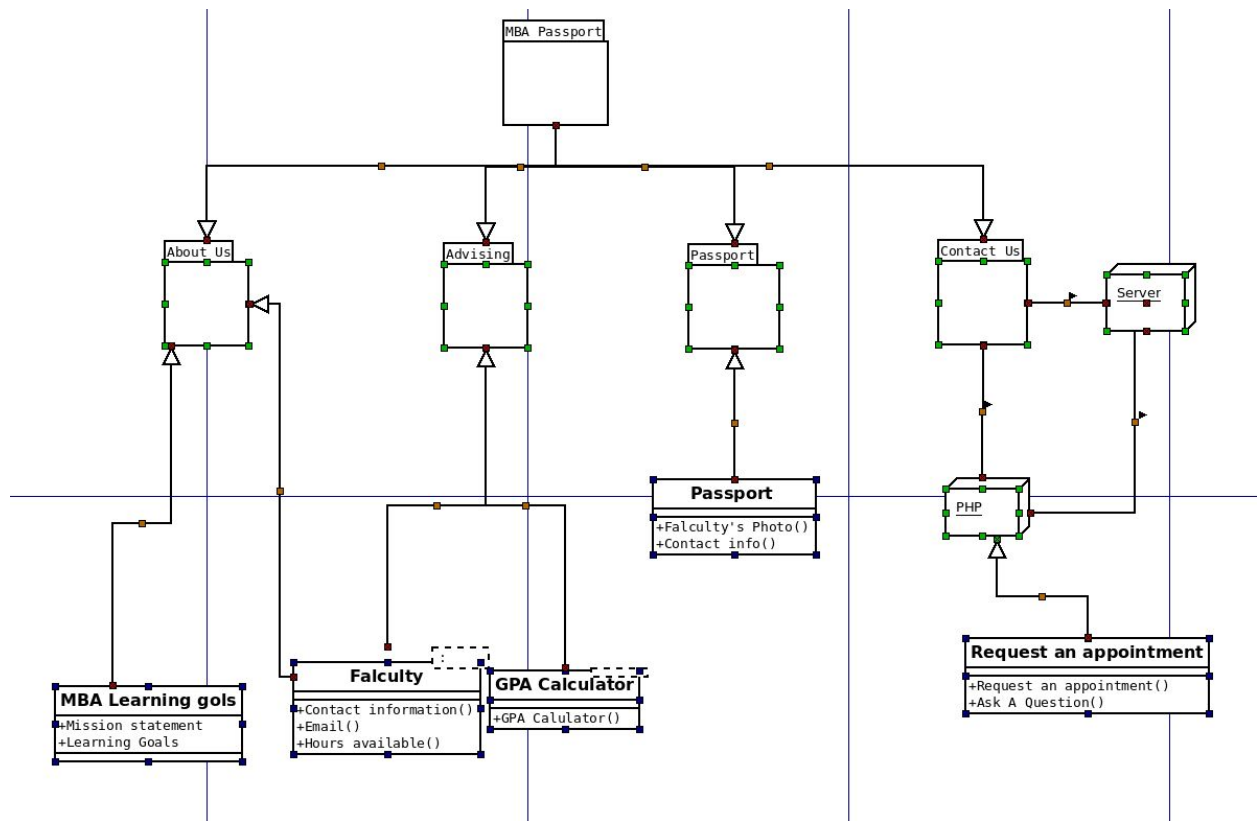

A database is going to be implemented that hold all the information that the MBA Passport holds (i.e. users: ID, Name, phone number, email, etc.).

## UI(User Interface)

User Interface shows homepage which includes detailed functions. Each of the detailed functions will direct users to the other pages.

## Detailed Design Diagram

The Detailed design diagram shows how all the packages interact with each other in order for the App to work.
